

ShadowFox Data Analyst Internship

Intermediate Level — Customer & Revenue Performance Analysis

Project objective

This report presents an intermediate-level business analysis focused on customer behaviour, revenue performance, product and segment contribution, regional differences, acquisition channels, time trends, and practical recommendations. The dataset is synthetic and was created for educational and internship demonstration purposes.

Dataset and preparation

The analysis contains 780 cleaned transactions covering July 2025 through June 2026, with 177 unique customers. The preparation process removed a duplicate transaction, standardized a missing region, normalized a category value, converted a numeric text value, and standardized date/currency/percentage formats.

Executive metrics

Metric	Value
Total Revenue	■291,942
Total Profit	■170,089
Orders	780
Unique Customers	177
Repeat Customer Rate	92.7%
Profit Margin	58.3%

Monthly trend

Month	Orders	Revenue	Profit
2025-07	65	■24,222	■13,903
2025-08	65	■24,447	■14,096
2025-09	65	■23,844	■13,927
2025-10	65	■25,979	■15,446
2025-11	65	■27,196	■17,011
2025-12	65	■31,092	■19,592
2026-01	65	■23,660	■12,392
2026-02	65	■19,376	■10,623
2026-03	65	■23,504	■13,611
2026-04	65	■24,117	■14,029
2026-05	65	■23,216	■13,172
2026-06	65	■21,290	■12,288

Trend finding: 2025-12 recorded the highest monthly revenue at ■31,092, while 2026-02 recorded the lowest at ■19,376. These differences are useful signals for investigating seasonality, campaigns, customer mix, or product availability.

Segment, product and regional performance

Customer Segment		
Segment	Revenue	Profit
Consumer	■116,250	■67,512
Small Business	■88,238	■51,184
Enterprise	■87,454	■51,393

Top Products		
Product	Revenue	Profit
Implementation Pack	■63,871	■35,311
Analytics Suite	■51,332	■30,788
Training Package	■47,182	■27,118
Security Plus	■35,902	■21,202
Cloud Pro	■28,681	■17,211
Support Premium	■23,607	■14,049
CRM Essentials	■22,204	■13,075
Data Backup	■19,163	■11,335

Regions		
Region	Revenue	Profit
East	■95,314	■54,973
South	■69,107	■40,682
North	■63,784	■37,419
West	■63,469	■36,861
Unknown	■268	■154

Key findings

- **Segment:** Consumer is the largest revenue-contributing customer segment.
- **Product:** Implementation Pack is the highest-revenue product in the dataset.
- **Region:** East is the highest-revenue region.
- **Acquisition:** Paid Ads generates the highest total revenue among the tracked channels.
- **Customer behaviour:** 164 of 177 customers placed more than one order, giving a repeat-customer rate of 92.7%.

Recommendations

1. **Protect high-value segments and products:** prioritize availability, service quality, and cross-sell opportunities around the strongest revenue contributors.
2. **Improve repeat purchasing:** identify one-time customers for targeted follow-up and retention campaigns, then measure whether repeat activity increases.
3. **Use regional comparisons:** study the customer mix and operating practices in the leading region and test whether similar approaches work in lower-performing regions.
4. **Evaluate acquisition channels:** compare revenue per customer and profitability before increasing investment in any one channel.
5. **Investigate time variation:** review campaigns, product availability and customer mix around high- and low-revenue months before setting future targets.

Methodology

The analysis moves from data-quality checks to descriptive metrics, then to customer, product, segment, regional, channel and time-based comparisons. Recommendations are based on observed patterns and are presented as decision-support hypotheses; the analysis does not claim that the observed relationships prove causation.

Conclusion

The project demonstrates an end-to-end intermediate analytics workflow: preparing a realistic dataset, checking data quality, calculating business metrics, identifying patterns across customers and revenue dimensions, communicating findings visually, and translating evidence into practical recommendations.
